Projects

Online Bookstore Website

- The online bookstore allows users to search and purchase a book based on title, author and subject. It also provides a neat UI so that users can view their selected books in a tabular format.
- Dynamic web page for each books and dynamic book listing.
- Front-end - HTML, CSS, Bootstrap and Back-end - PHP, JavaScript, MySQL

Fake News Detection App - ML

- Using python EDA has been done on the dataset. The dataset is taken from kaggle and preprocessed using python and then finally the dataset is trained using many machine learning models and found the model which gives the best prediction.
- Front-end - Android Studio and Back-end - Flask, Python

Password List Manager

- The password list manager provides a secure vault for all of your passwords. This application is made using Tkinter which provides a GUI for the comfort of the user.
- After entering the master password the user can add their username and password and can view all their saved passwords.
